

Project Name: AHU & operating theatre refurbishment,

Dumfries & Galloway Royal Infirmary

Client: NHS Dumfries & Galloway

Value: £2,939,000\*

Taylor and Fraser  
Construction Division

*Taylor and Fraser undertook the upgrading of five operating theatres, whilst simultaneously replacing ventilation and chiller plant at Dumfries & Galloway Royal Infirmary. The project was phased, refurbishing a single theatre at a time, to ensure minimum disruption to the Client and patients. An external pre-fabricated plant room was also installed local to the theatres, again to minimise disruption and thus ensuring continuity of service throughout the duration of the project. Given the significant services element, high specification medical equipment and infection control requirements, benefit was had through use of Taylor and Fraser's in-house mechanical expertise. Project completion was successfully achieved in March 2008.*

The project comprised of the following trades:

- Downtakings and alterations
- Groundworks and external works
- Services Installations
- Steelwork
- Medical and operating theatre equipment
- Refrigeration equipment
- Joinerwork, cabinetry and worktops
- Internal floor, wall and ceiling finishes
- Audio and visual equipment
- Fire protection

- Consulting Engineer: Nifes Consulting Group
- Main Contractor: Taylor and Fraser
