

Project Name: Scottish Prison Service:

Boiler replacement Framework Agreement

Client: Scottish Prison Service

Value: £3,000,000*

Taylor and Fraser

The Scottish Ministers concluded a framework with Taylor and Fraser for the design, supply, installation and commissioning of Boilers to Scottish Prison Service (SPS). We have completed numerous projects spanning sixteen SPS establishments throughout Scotland. Initially a three-year framework agreement, with an option to extend, we were delighted SPS recommended that the framework should be extended for a further two years. In successfully undertaking this programme, we have demonstrated our ability to manage the work in a secure environment meeting the particular requirements of the authorities.

The Mechanical and All Trades works comprised:

- Extensive survey of existing mechanical and electrical services
- Mechanical, design and integration
- Pre-fabrication of pipework systems
- Co-ordinated removal of existing boiler plant, pipe work and controls, etc
- Co-ordinated installation of new dual fired boiler plant (Steam/MTHW/LTHW) pipe
- Full BMS to provide integrated control of the mechanical services
- Builderworks

"All projects have been carried out effectively and efficiently and Taylor and Fraser's specialist knowledge and skills have been beneficial to SPS by their input in to product selection, product standardisation, value and reliability."
